

The Tiger Swallowtail is Georgia's State Butterfly.

It's black and yellow stripes make it easy to spot, and are also the reason we call it "tiger." The long 'tails' on it's lower wings look like a swallow's long tail feathers.

All butterflies go through major changes from egg to larva to pupa and finally adult. We call this change **METAMORPHOSIS**. In the boxes below draw the different life cycle changes.

Egg

Larva
(caterpillar)

Pupa
(chrysalis)

Adult
(butterfly)
